

SUMMER INTERNSHIP

REPORT

SUMMER INTERNSHIP REPORT

Submitted in partial fulfillment of the requirements for the award of the degree of

INTEGRATED MASTER SCIENCE IN INFORMATION TECHNOLOGY (MSC-IT)

Student Name: Smit Patel

Enrollment No: 2402106040

Semester: 4th

Internship Organization: Hornbook Technologies Pvt. Ltd.

Project Title: CineFlix – Movie & TV Show Streaming Information Web Application

Duration: From 04 June 2026 To Ongoing

Submitted to

Department of Computer Applications

[SHREYARTH UNIVERSITY]

Academic Year: 2026-27

CERTIFICATE

This is to certify that Mr.Smit Patel, **2402106040** ,student of IMSC, has successfully completed the Summer Internship at Hornbook Technologies Pvt. Ltd. From 18 June 2026 To Present.

During the internship period, the student worked on the project titled "CineFlix" and completed the assigned tasks satisfactorily.

We wish him success in future endeavors.

Company Supervisor Signature

Himanshu Kanpariya

HR Manager

ACKNOWLEDGEMENT

I express my sincere gratitude to Hornbook Technologies Pvt. Ltd. for providing me the opportunity to undergo internship training. I would like to thank my company mentor, management team, and all staff members for their valuable guidance and support.

I am also thankful to the Principal, Head of Department, Internship Coordinator, and Faculty Guide of SHREYARTH UNIVERSITY College for their continuous encouragement and assistance throughout the internship period.

Finally, I thank my family and friends for their support and motivation.

CHAPTER 1: COMPANY PROFILE

1.1 Introduction

Hornbook Technologies Pvt. Ltd. is a leading software development and IT consulting company based in Ahmedabad, Gujarat. The company specializes in delivering innovative digital solutions, including custom software, web applications, mobile applications, SaaS products, cloud solutions, and UI/UX design services. With a client-centric approach and experienced development team, the company serves startups, small businesses, and enterprises across India and several international markets. During my internship, I had the opportunity to work with modern web technologies and gain practical experience in real-world software development projects.

1.2 Company Details

Company Name: Hornbook Technologies Pvt. Ltd.

Address: 536-538, Rudra Business Park, Opp. Metro Pillar No. 125, Mahadevnagar Tekra, Vastral, Ahmedabad, Gujarat – 382418, India.

Website: www.hornbooktechnologies.com

Industry Type: Information Technology (IT Services & Software Development)

Services Offered:

- Custom Software Development
- Web Application Development
- Front-End Development
- Mobile Application Development
- SaaS Development
- Cloud & DevOps Services
- UI/UX Design
- IT Consulting
- Dedicated Development Teams
- API Integration and Enterprise Solutions

1.3 Organizational Structure

Hornbook Technologies Pvt. Ltd. follows a structured organizational hierarchy that promotes effective communication and efficient project execution. The company is managed by senior management and project managers, followed by team leaders who supervise software developers, UI/UX designers, quality assurance engineers, and support staff. During the internship, interns work under the guidance of experienced mentors and team leads, allowing them to gain practical knowledge while contributing to live development projects.

1.4 Objectives of the Company

The primary objective of Hornbook Technologies Pvt. Ltd. is to deliver innovative, reliable, and high-quality software solutions that help businesses achieve digital transformation. The company aims to provide customer-focused services through modern technologies, agile development practices, and continuous innovation. It is committed to building scalable web and mobile applications while maintaining quality, transparency, timely delivery, and long-term client satisfaction.

CHAPTER 2: INTERNSHIP WORK DETAILS / PROJECT DESCRIPTION

2.1 Project Title

CineFlix – Movie & TV Show Streaming Information Web Application

2.2 Project Objective

The objective of this project is to develop a modern and responsive web application that allows users to explore movies and TV shows using the TMDB (The Movie Database) API. The application enables users to search for movies and TV series, view detailed information, watch official trailers, apply filters such as genre, year, rating, and popularity, and create a personalized watchlist. The project aims to provide a user-friendly interface with fast performance, responsive design, and an engaging browsing experience similar to popular streaming platforms.

2.3 Technologies Used

- HTML5
- CSS3
- Tailwind CSS
- JavaScript (ES6+)
- React.js
- Vite
- React Router DOM
- Axios
- Context API
- Local Storage
- TMDB (The Movie Database) API
- Lucide React Icons
- Git & GitHub

2.4 Tasks Performed

- Requirement analysis and project planning
- UI/UX design implementation
- Responsive front-end development
- API integration using TMDB
- Dynamic routing using React Router
- State management using Context API
- Movie and TV show search implementation

- Genre, year, rating and sorting filters
- Pagination implementation
- Watchlist management using Local Storage
- Trailer integration using YouTube
- Error handling and debugging
- Performance optimization
- Testing across different screen sizes

2.5 Project Modules

Module 1: Home Page

Displays featured movies and TV shows with a hero banner, trending content, popular movies, and navigation to different sections.

Module 2: Movies

Allows users to browse movies by categories such as Popular, Trending, Top Rated, Now Playing, and Upcoming. Users can search, filter, and sort movies based on different criteria.

Module 3: Movie Details

Displays complete information about a selected movie including poster, backdrop, overview, genres, runtime, release date, cast, rating, recommendations, and trailer.

Module 4: TV Shows

Provides browsing functionality for TV series including Popular, Trending, Top Rated, Airing Today, and On The Air categories with filtering and sorting options.

Module 5: Watchlist

Allows users to save their favorite movies and TV shows locally. Users can remove items, view average ratings, total saved movies, and quickly navigate back to movie details.

Module 6: Responsive Design

Ensures the application works smoothly across desktop, tablet, and mobile devices using responsive layouts built with Tailwind CSS.

CHAPTER 3: LEARNING OUTCOMES

During the internship, I learned:

- Learned modern front-end development using React.js and Vite.
 - Gained experience integrating REST APIs using Axios.
 - Improved understanding of React Hooks, Context API, and state management.
 - Learned client-side routing using React Router DOM.
-

- Developed responsive user interfaces using Tailwind CSS.
- Implemented Local Storage for persistent watchlist functionality.
- Improved debugging and problem-solving skills.
- Learned project organization using feature-based folder structure.
- Enhanced knowledge of Git and GitHub for version control.
- Understood API handling, pagination, filtering, and dynamic routing.

CHAPTER 4: SCREENSHOTS / CODE SNIPPETS

Home Page

Movies Page

Movie Details Page

TV Shows Page

Watchlist Pages

Sample Code

API call using Axios

```
import axios from "axios";

const tmdb = axios.create({
  baseURL: import.meta.env.VITE_TMDB_BASE_URL,
  headers: {
    accept: "application/json",
    Authorization: `Bearer ${import.meta.env.VITE_TMDB_TOKEN}`,
  },
});
export default tmdb;
```

Dynamic Routing

```
const App = () => {
  const {movieId} = useContext(PR_context)
  return (
    <>
      <Navbar/>
      <ScrollTop/>
      <Routes>
        <Route path="/" element={<Home/>}/>
        <Route path="/MoviesPage" element={<MoviesPage/>}/>
        <Route path="/MoviesPage/:id" element={<MovieDetailsPage/>}/>
        <Route path="/TvShows" element={<TvShows/>}/>
        <Route path="/WatchListPage" element={<WatchListPage/>}/>
        <Route path="*" element={<NotFoundPage/>}/>
      </Routes>
    </>
  )
}
```

CHAPTER 5: CONCLUSION

The internship provided practical experience in developing a modern React-based web application using industry-standard technologies. During the project, I learned how to build responsive user interfaces, integrate third-party REST APIs, manage application state, implement dynamic routing, and optimize user experience. Developing the CineFlix application improved my technical knowledge, debugging abilities, and problem-solving skills while giving me valuable exposure to real-world web development practices.

CHAPTER 6: FUTURE SCOPE

- User Authentication (Login/Signup)
- Cloud Database Integration (Firebase/MongoDB)
- Personalized Movie Recommendations
- AI-powered Movie Recommendation System

- User Reviews and Ratings
- Multi-language Support
- Dark/Light Theme
- Streaming Platform Integration
- Progressive Web App (PWA)
- Admin Dashboard for Content Management
